

Hysaam Riad

Hi, I'm Riad!

I design UI and products, work on design systems, and build software. I use Arch Linux and have been designing since 2017. I believe Inter Variable is the most influential innovation in the history of typefaces.

What I've worked on so far...

1. I design digital products across SaaS, healthcare, finance, and creative tools for teams like Linearity, CADA, ComPsych, and Golden Keys Global.
2. I am currently designing and building my own operating system as a personal project.
3. I sometimes build desktop apps and software tools to solve my own daily problems.
4. I believe good design comes from real problem solving. Every piece on screen has a clear purpose, backed by deep focus and notebook notes.

Capabilities

Product Design

Turning complex business ideas into clear, simple digital products that feel easy to use.

UI Design

Designing clean, modern screens where typography and spacing makes it easy to spot.

UX Design

Mapping out smooth step-by-step paths so people get things done.

UI Interaction

Adding thoughtful click feedback and small micro-details that make screens feel natural.

Motion Design

Using subtle screen transitions to guide focus from one step to the next effortlessly.

Software Development

Bridging visual layout and real code to make handoffs painless for developers.

Design Systems

Building organized component libraries so features stay consistent as products grow.

Prototyping

Testing interactive, clickable models early on to catch and fix flaws before coding.

Philosophy

Users Come First

Every design decision begins with the people who use the product. Understanding their needs, expectations, and challenges helps create experiences that feel intuitive, accessible, and genuinely valuable.

Clarity Builds Trust

Great interfaces should never leave users guessing. Clear hierarchy, meaningful interactions, and thoughtful communication reduce cognitive load, making every action feel predictable, reliable, and easy to understand from the very first click.

Every Detail Counts

Exceptional experiences are built through countless small decisions. Typography, spacing, motion, consistency, and visual balance may seem subtle on their own, but together they shape how users perceive quality and build confidence in a product.

Simplicity Wins Always

Complex systems don't have to create complicated experiences. By removing unnecessary distractions and focusing on what truly matters, products become easier to learn, faster to use, and more enjoyable for everyone.

Products Must Evolve

User expectations, technology, and business goals are constantly changing. Great products embrace continuous improvement through feedback, experimentation, and thoughtful iteration, ensuring they remain useful long after launch.

Quality Earns Loyalty

People remember products that respect their time and consistently deliver reliable experiences. Lasting trust is earned through thoughtful craftsmanship, attention to detail, and a commitment to quality in every interaction.

FAQs

What is your design process?

My process is user-centered and iterative. It usually spans research, wireframing, interactive prototyping, usability testing, and high-fidelity UI design to ensure balanced user and business goals.

What tools do you use daily?

My core tools include Figma and FigJam for UI/UX and whiteboarding, Adobe Creative Cloud for visuals, Framer or Webflow for prototyping, and Jira/Notion for project tracking.

How do you collaborate with developers?

I design with implementation in mind. I build clean Figma design systems, maintain clear auto-layout specs, and document components carefully to ensure seamless handoffs and fast dev integration.

Do you have experience with Design Systems?

Yes. I build, maintain, and scale design systems from scratch—including typography, color tokens, and accessible, reusable UI components that help engineering teams build faster.

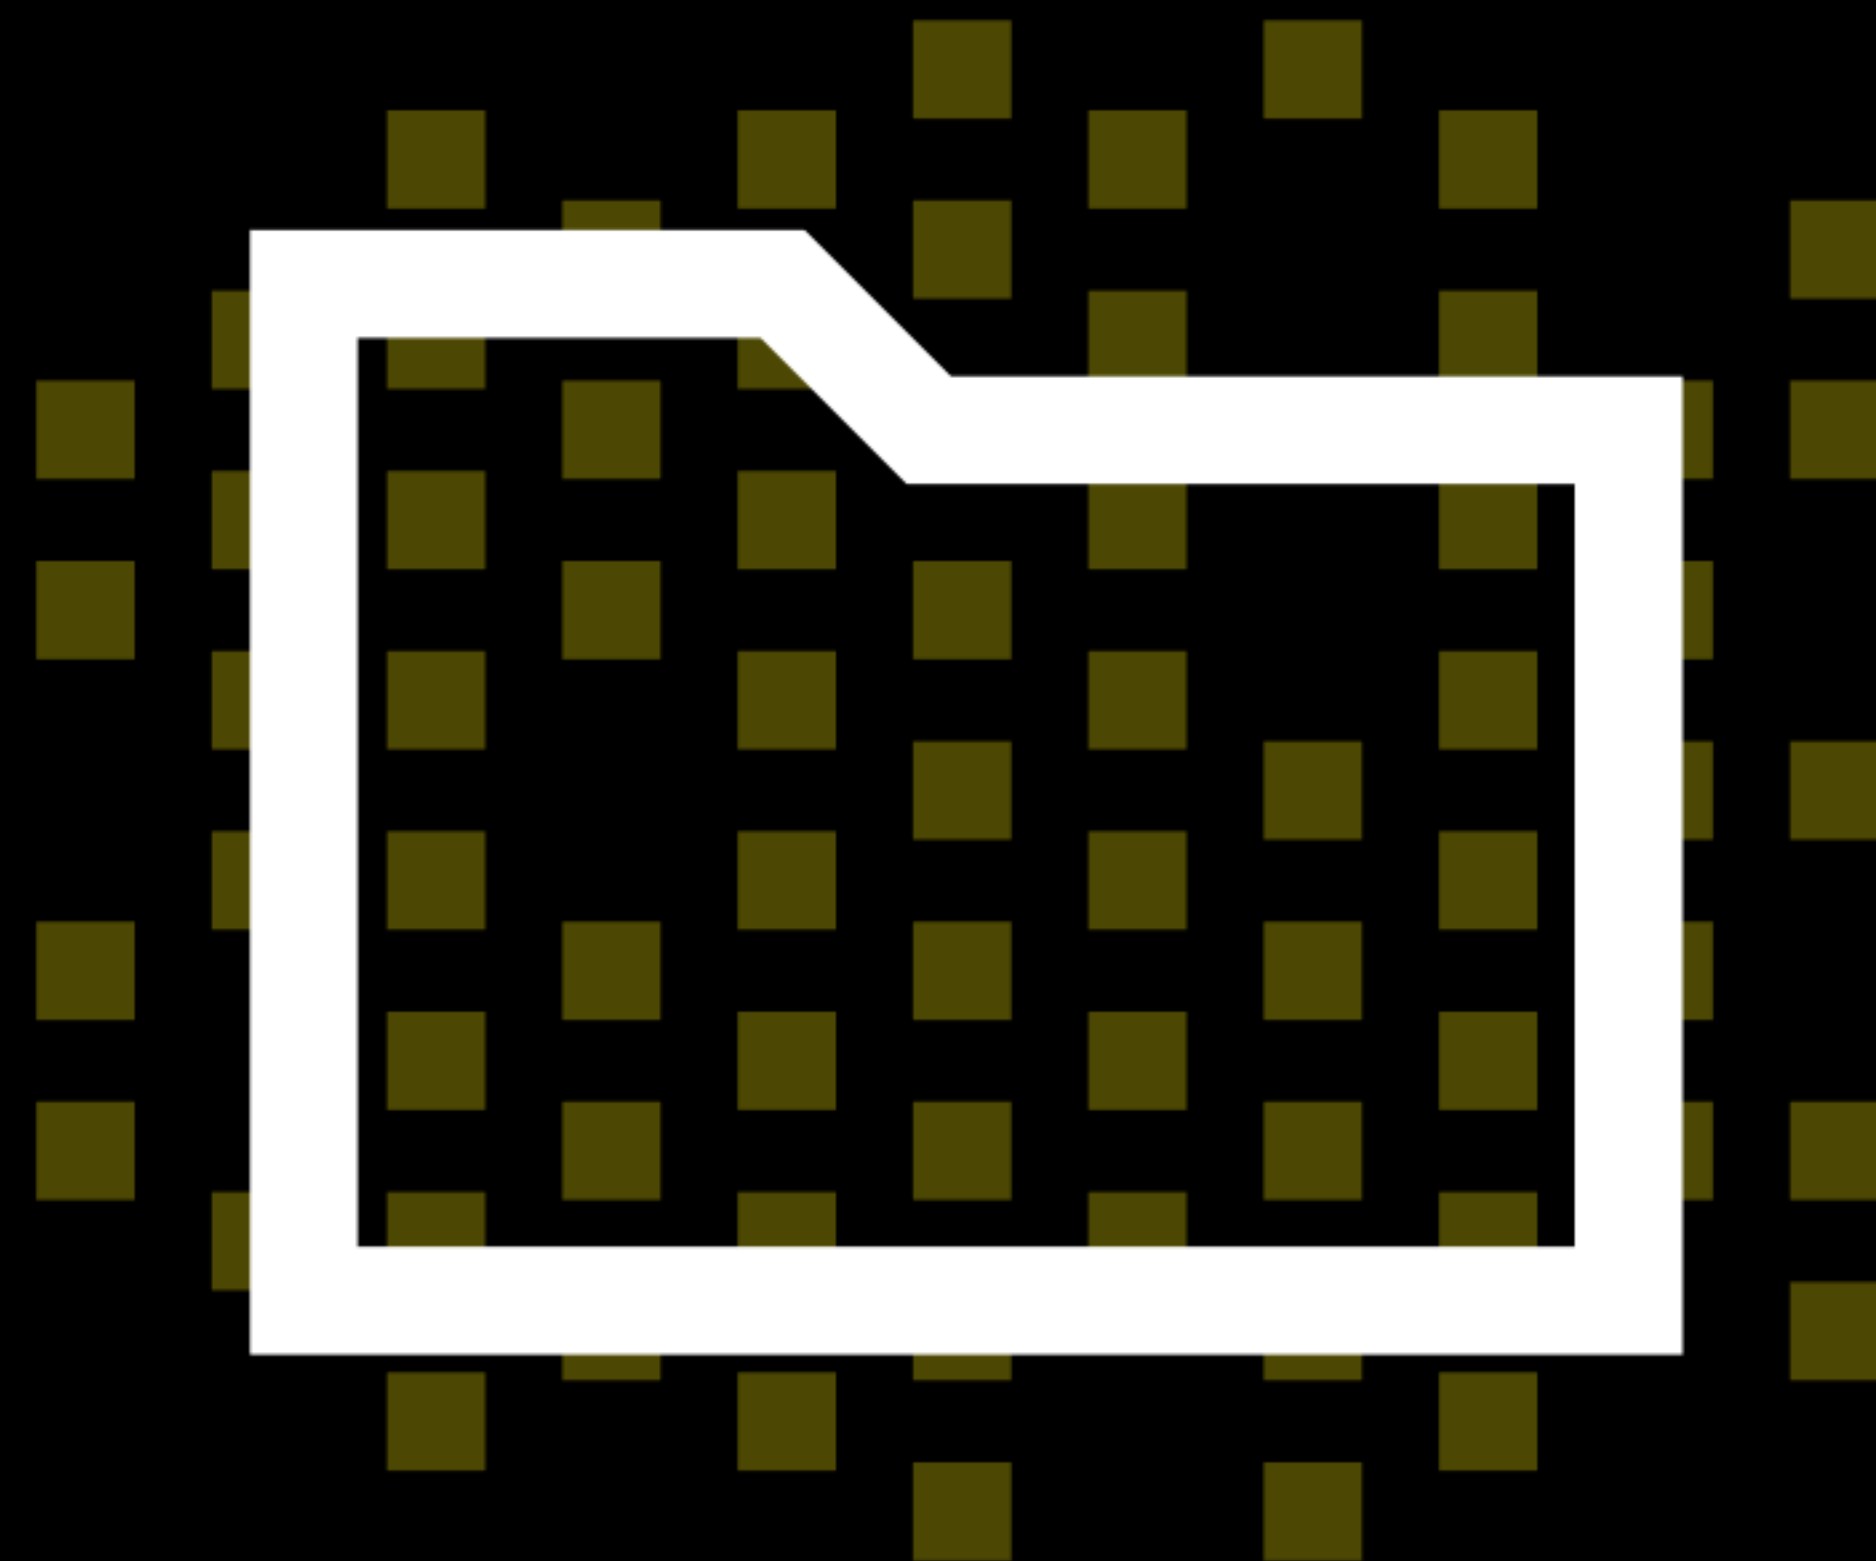

How do you handle design feedback & iteration?

I treat feedback as an essential part of refining products. I validate decisions with user data and testing, while staying open-minded to critique from stakeholders and cross-functional teammates.

Can you conduct user research and testing?

Absolutely. I conduct qualitative user interviews, run usability tests, perform competitive analysis, and map user journeys to solve underlying pain points before moving to UI design.

CADA

Overview

Complex healthcare platforms do not have to create complicated experiences. By removing unnecessary friction and designing clear paths, patient interactions become easier to navigate, faster to manage, and deeply reassuring for people managing sensitive medical data journeys.

Impact

Streamlined complex clinical flows into an intuitive digital experience that balances patient empathy with data accuracy. The redesigned system organizes sensitive health information into simple visual hierarchies, directly improving user trust and layout scannability. By establishing a clean interface design framework for multi-language medical portals, the solution successfully optimizes high-intent digital conversion funnels while ensuring complete platform accessibility across international health markets.

Linearity

Overview

Intricate multimedia software does not have to create complicated experiences. By removing unnecessary layout clutter and focusing on core interactive tools, creative applications become easier to master, faster to operate, and significantly more enjoyable for global design professionals.

Impact

Transformed advanced creative application controls into a highly responsive, modern interface built for rapid user execution. The sleek layout system organizes comprehensive design features into accessible toolsets, directly boosting daily workflows and user retention. By delivering pixel-perfect micro-animations and modular canvas frameworks for venture-backed SaaS environments, the solution supports product scalability across an ecosystem commanding up to eighty million dollars in private market valuation.

ComPsych

Overview

Massive enterprise networks do not have to create complicated experiences. By removing unnecessary functional barriers and focusing on layout clarity, corporate portals become easier to navigate, faster to understand, and highly efficient for millions of global workforce members.

Impact

Engineered a comprehensive B2B web presence and visual system capable of handling extensive corporate wellness workflows at scale. The clean information architecture organizes dense resource databases into clear digital paths, directly maximizing platform utility and daily operational confidence. By architecting scalable, accessible interface frameworks tailored for the world's largest employee assistance provider, the design seamlessly serves a massive network of over seventy-five thousand global corporate client accounts.

Your Life. Your Work. Your Best.

The worldwide leader in mental health and absence management.

Riteflow

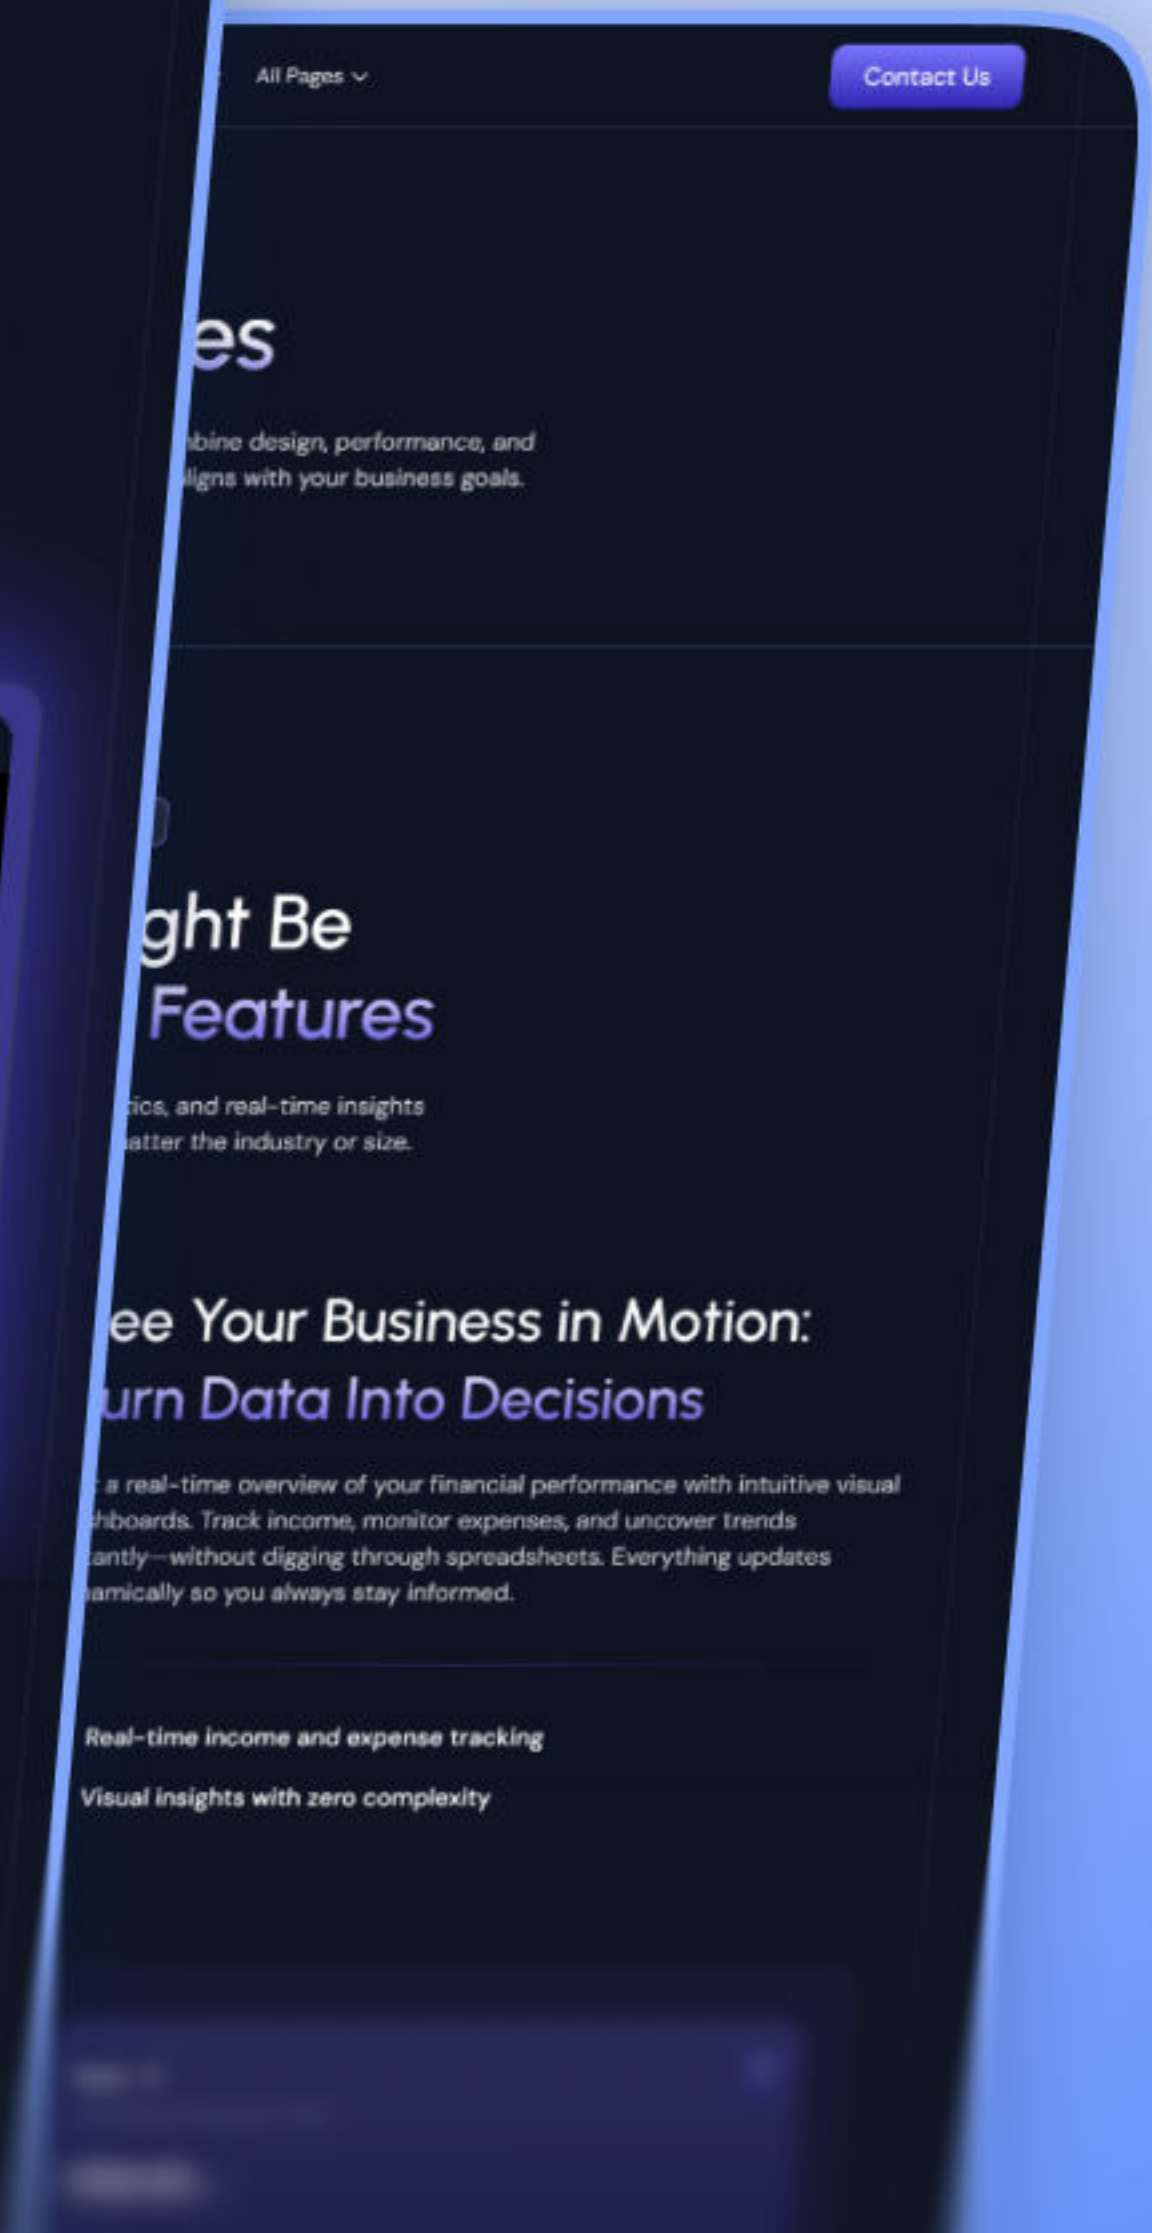

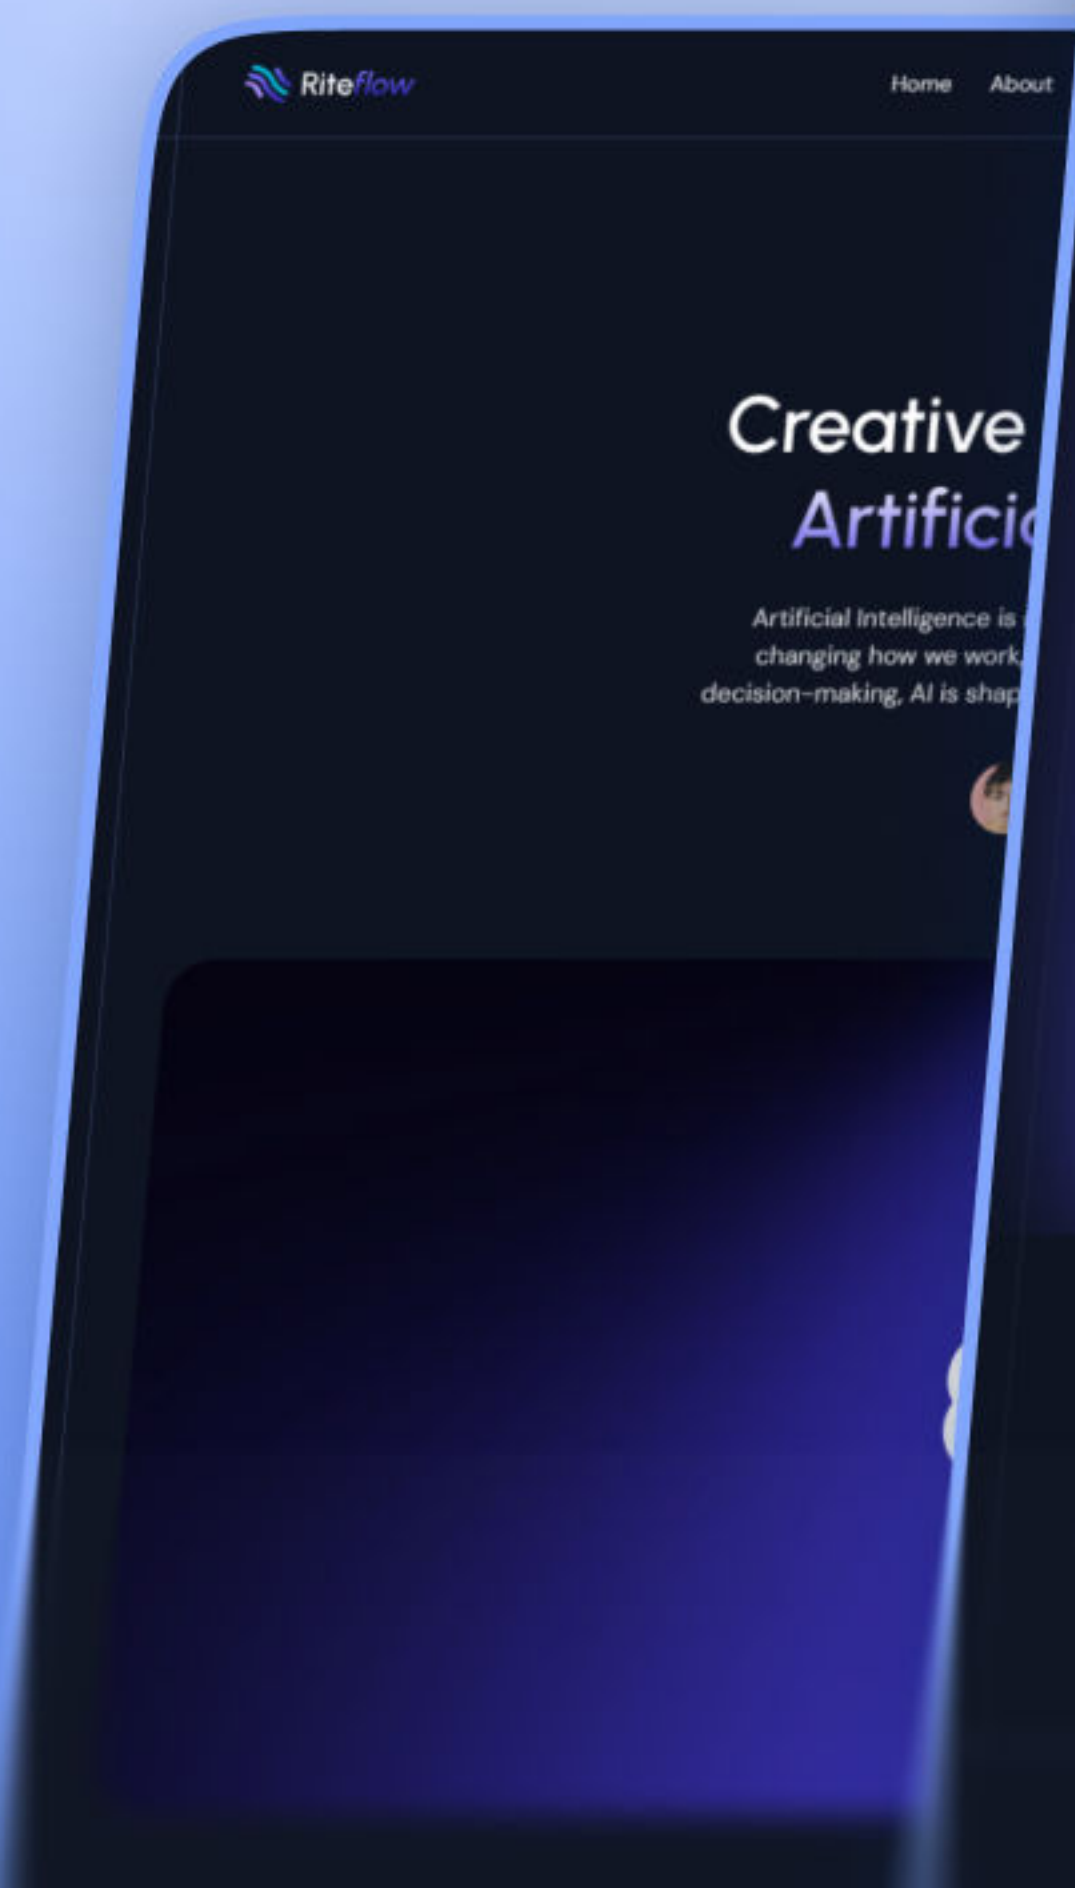

Overview

Demanding automation systems do not have to create complicated experiences. By removing unnecessary setup distractions and focusing on linear data paths, operational software becomes easier to learn, faster to configure, and highly predictable for product engineering teams.

Impact

Restructured complex data automation workflows into a unified, high-performance interface that minimizes onboarding friction for active power users. The logic-driven layout translates background logic processes into intuitive front-end panels, directly lowering user execution errors and system drop-offs. By deploying modular, reusable UI components optimized for rapid SaaS expansion, the final system enhances overall platform stickiness and establishes a robust visual foundation for high-growth tech portfolios.

HRFlow

Overview

Dense employee databases do not have to create complicated experiences. By removing unnecessary functional friction and focusing on structured record layouts, HR management tools become easier to navigate, faster to process, and highly reliable for busy human resource professionals.

Impact

Transformed fragmented administrative data streams into an organized digital environment built for seamless workplace record coordination. The structured interface groups sensitive tracking features into distinct visual zones, directly reducing data entry fatigue and day-to-day user mistakes. By engineering clean, highly scalable layout components for internal workforce tools, the design smoothly guides users through daily tracking milestones while maximizing operational data clarity for modern corporate personnel teams.

UrbanNest

Overview

Technical architecture profiles do not have to create complicated experiences. By removing unnecessary presentation clutter and focusing on structural design galleries, portfolio platforms become easier to appreciate, faster to load, and deeply immersive for high-tier international property developers.

Impact

Reimagined premium real estate showcases by deploying a highly sophisticated, minimalist interface that allows spatial project photography to breathe. The elegant layout grid transforms technical blueprints and structural details into a striking visual narrative, directly capturing user attention and boosting client inquiries. By establishing a unified corporate identity tailored for modern construction markets, the digital canvas successfully elevates brand authority while effortlessly engaging affluent cross-border real estate investors.

Overview

Creative agency showcases do not have to create complicated experiences. By removing unnecessary visual noise and focusing on prominent project displays, professional portfolios become easier to evaluate, faster to browse, and highly memorable for potential top-tier enterprise partners.

Impact

Conceptualized a bold, forward-thinking visual identity that sets a new standard for modern digital agency presentation platforms. The sharp interface design utilizes dynamic typography and fluid screen transitions, directly reinforcing creative credibility and driving prospective client engagement. By structuring an optimized business lead-generation funnel with high-impact case study modules, the finished platform effectively communicates market-leading authority while streamlining commercial inquiries for fast-growing media consultation teams.

Higher just a concept — it's a revolution
who and connect. Gain automation to
ing a smarter, faster, and more efficient

Benefits of Embracing AI in Everyday Work

The rise of AI tools offers tangible advantages for both individuals and organizations.

Key Benefits

- **Time Efficiency:** Automate repetitive processes and focus on strategy.
 - **Accuracy:** Minimize human error through data-driven decisions.
 - **Scalability:** Manage large workloads without sacrificing quality.
 - **Innovation:** Free your team to think creatively and explore new ideas.
 - **Personalization:** Deliver tailored solutions for every client or user.
- AI allows teams to make faster, smarter, and more informed decisions — turning data into actionable results.

Interesting architecture trends

Quality Construction: The backbone of Longevity. High-quality construction ensures that buildings are not only visually appealing but also durable and safe for occupants. By prioritizing craftsmanship and using premium materials, construction companies can create structures that stand the test of time. This approach minimizes future maintenance costs and enhances property value. **Sustainability in the Core:** Another critical aspect of future maintenance costs and enhances property value. **Sustainability in the Core:** Another critical aspect of future maintenance costs and enhances property value. **Sustainability in the Core:** Another critical aspect of future maintenance costs and enhances property value.

The future ahead

AI is not a trend — it's a transformation that will define the next decade of innovation. From creative industries to scientific research, the collaboration between human talent and intelligent systems will unlock new possibilities.

Ways Humans and AI Collaborate

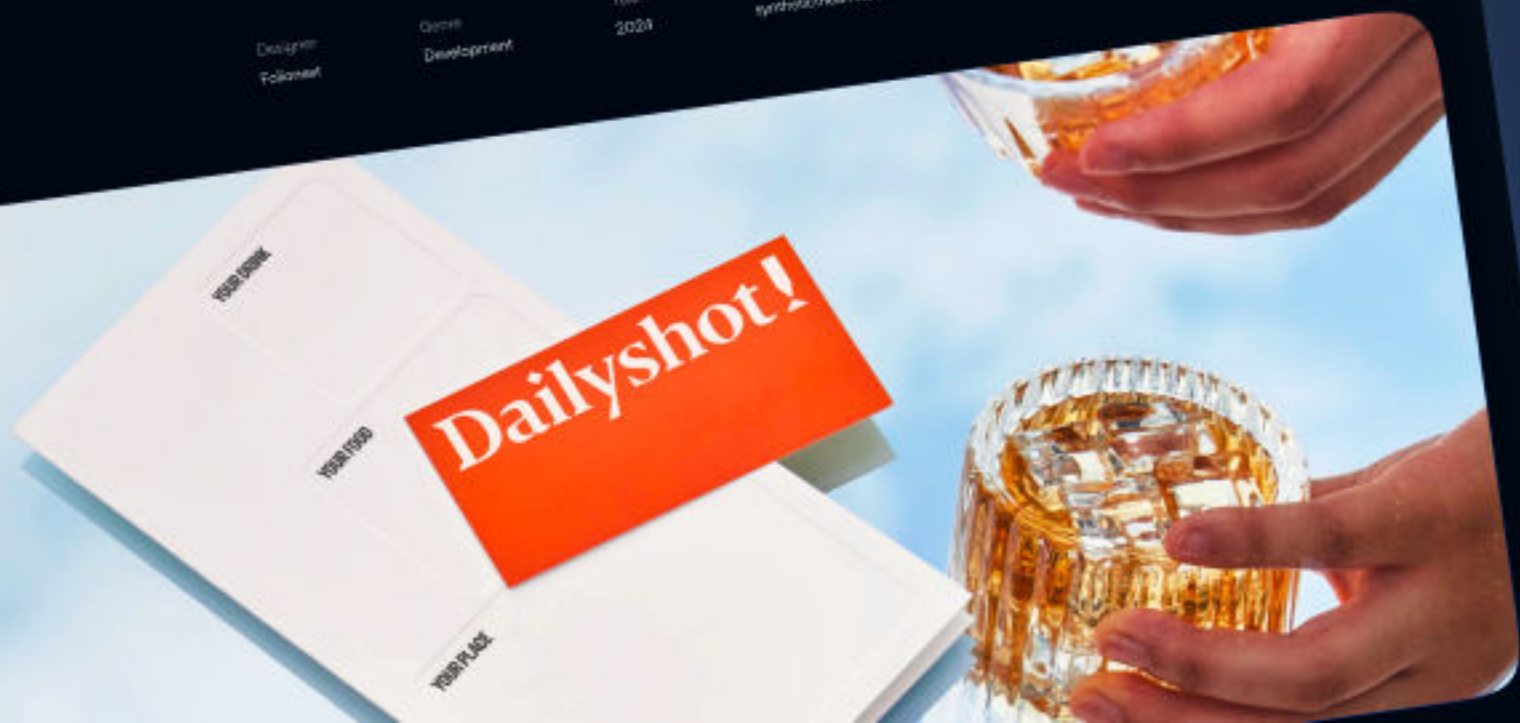

- Humans define goals → AI accelerates execution.
 - AI analyzes data → humans interpret context.
 - AI provides insights → humans make ethical choices.
 - AI automates tasks → humans innovate beyond them.
- The future is not humans versus AI, but humans plus AI — a partnership built on trust and shared progress.

Green building practices reduce environmental impact and contribute to healthier living spaces. Green building practices not only reduce environmental impact but also contribute.

Co.mind

Overview

Complex business strategies do not have to create complicated experiences. By removing unnecessary corporate jargon and focusing on intuitive layout flows, consulting platforms become easier to understand, faster to navigate, and exceptionally engaging for global enterprise teams.

Impact

Architected a vibrant, human-centric interface that effectively brings creative brand consulting into an accessible digital environment. The modern layout system organizes abstract strategic workflows into clear, bite-sized components, directly improving user retention and content scannability. By blending clean layout grids with unique corporate branding elements, the resulting web experience clearly highlights specialized agency capabilities while creating a highly memorable digital touchpoint for forward-thinking international business clients.

Co.mind

LET'S TALK

STRATEGY  • PRODUCT DEFINITION  • PROJECT MANAGEMENT  • BRAND DESIGN  • INTERFACE

Golden Keys G.

Overview

High-tier residency portals do not have to create complicated experiences. By removing unnecessary form friction and focusing on premium structural layouts, immigration platforms become easier to navigate, faster to trust, and highly efficient for affluent international real estate investors.

Impact

Conceptualized an exquisite, luxury-oriented digital identity designed to match the high standards of top-tier wealth advisory networks. The sophisticated interface balances elegant styling with practical lead-generation systems, directly streamlining client consultation journeys for premium golden visa acquisitions. By structuring highly optimized conversion funnels alongside clean spatial photography blocks, the finished platform effortlessly guides high-net-worth individuals through elite, multi-million dollar international luxury asset portfolios with absolute clarity.

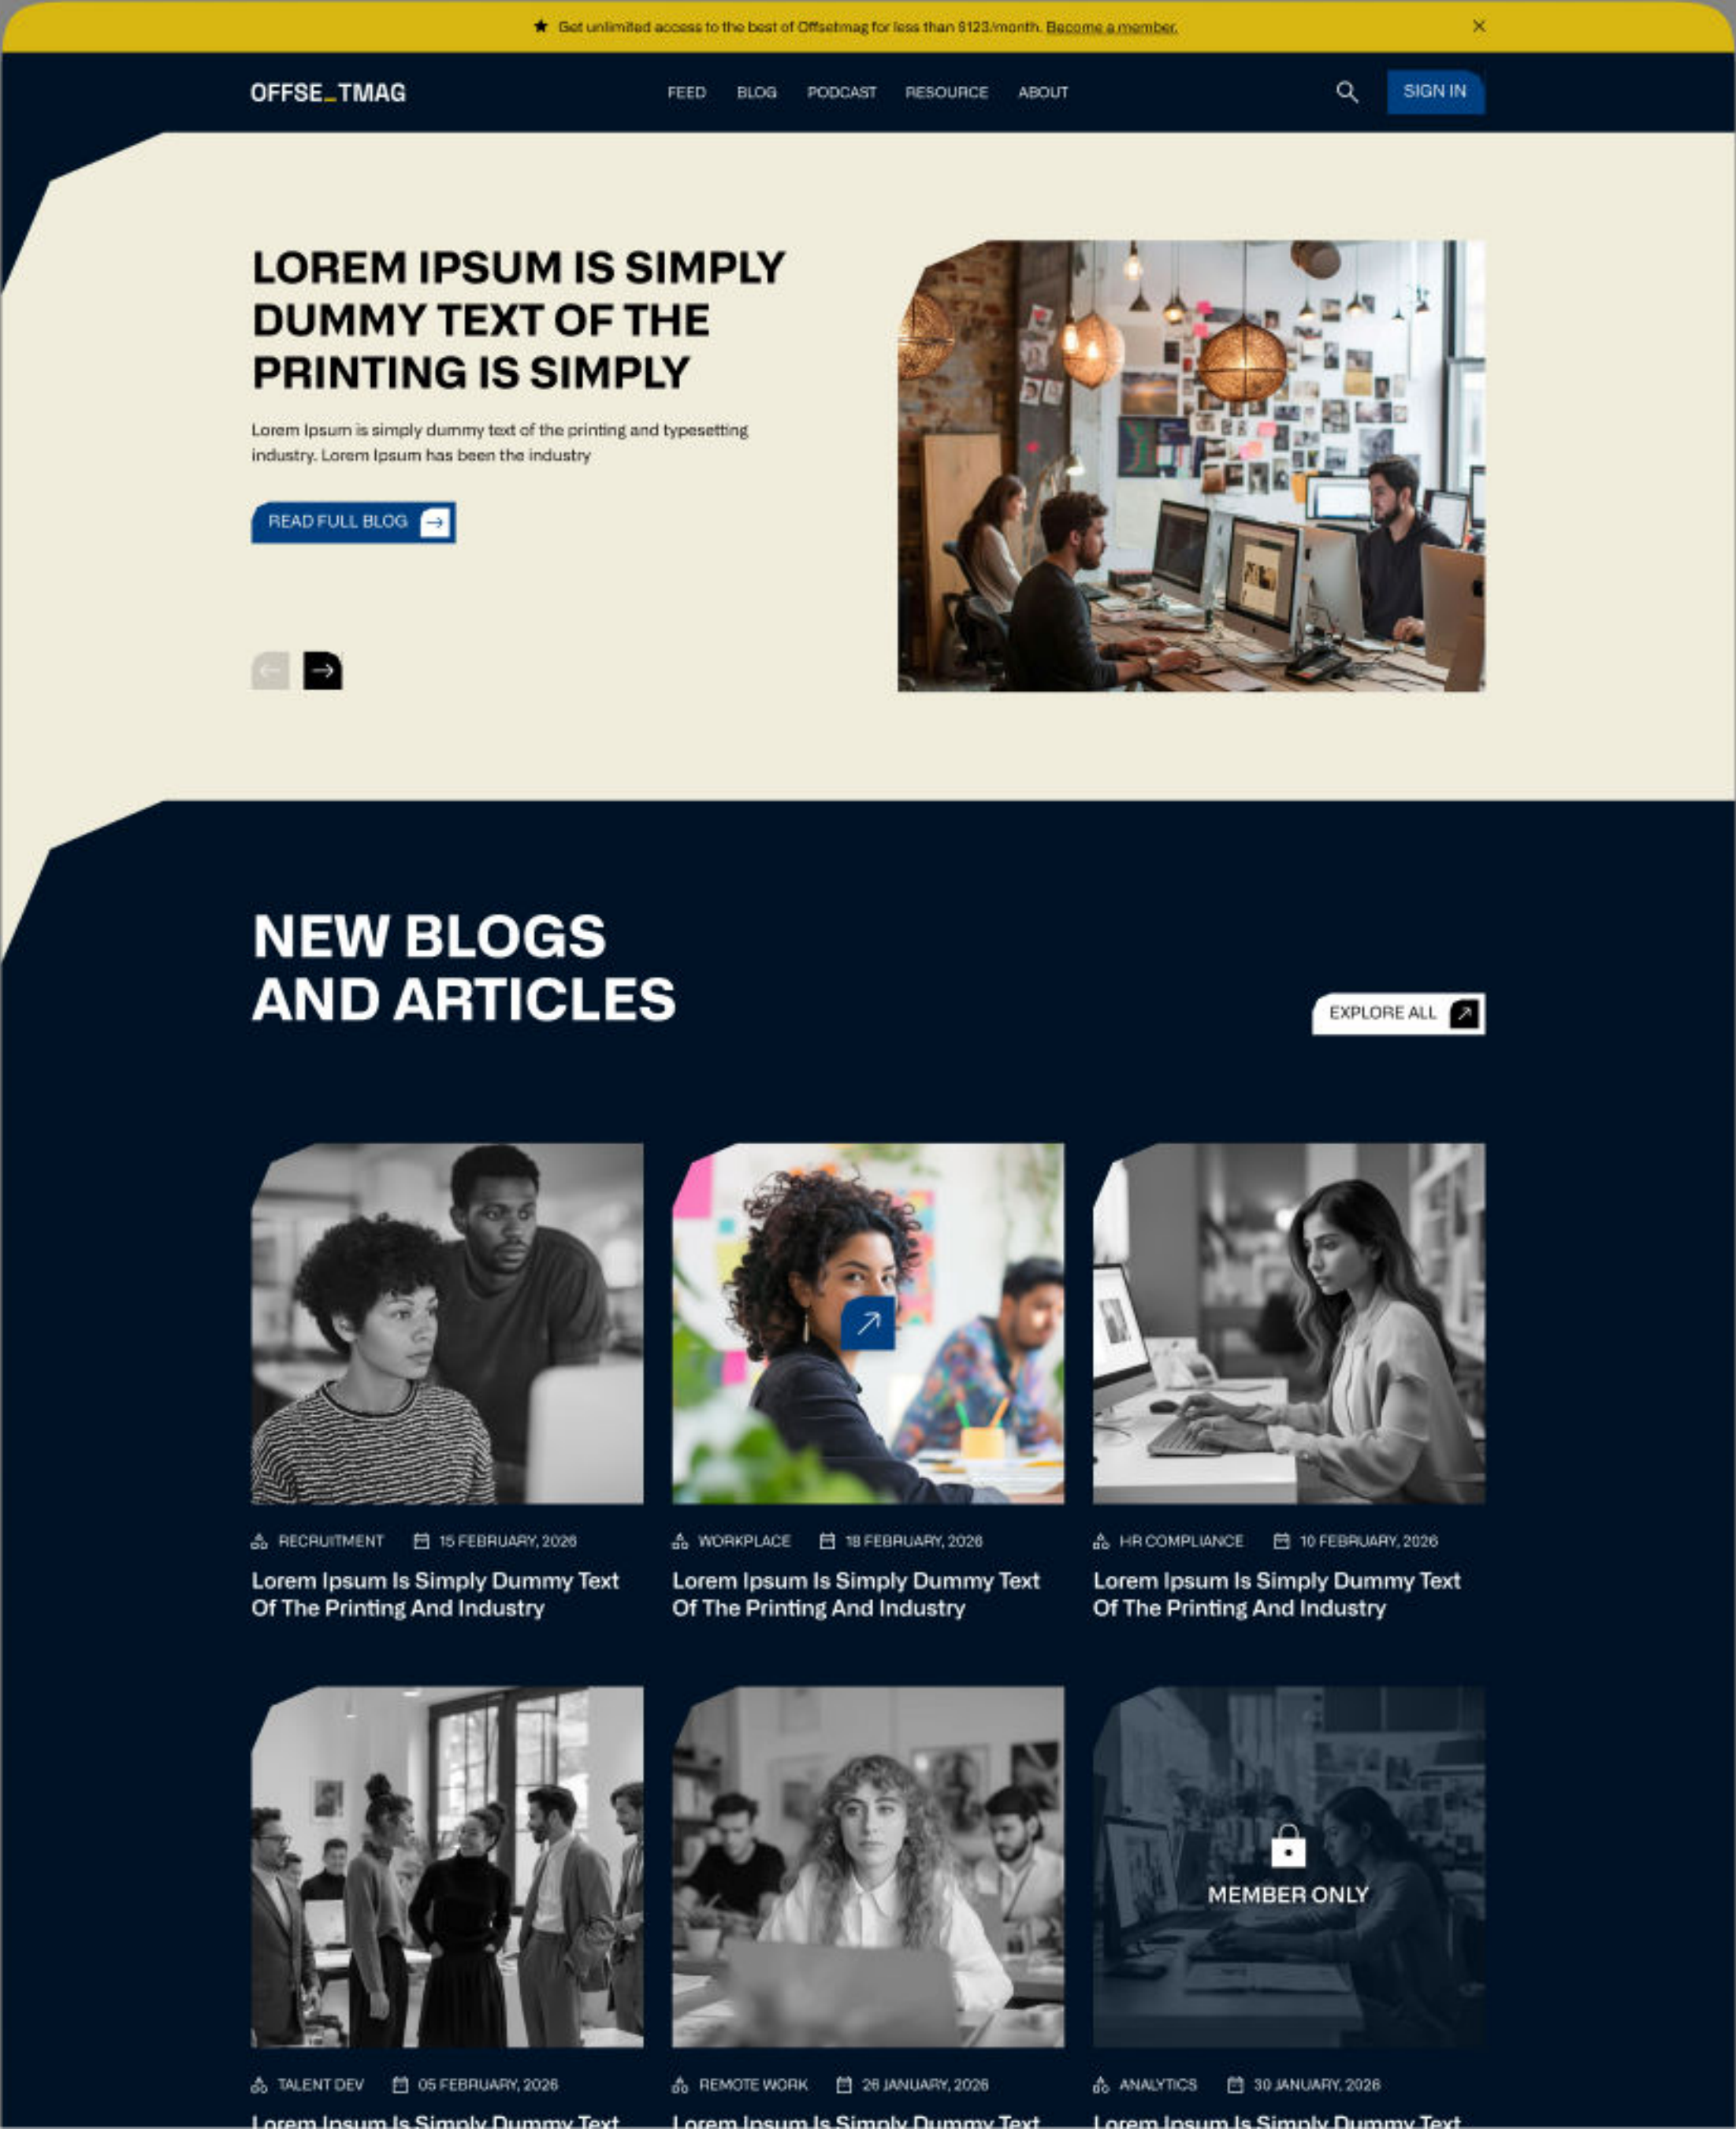

OffsetMeg

Overview

Heavy publication feeds do not have to create complicated experiences. By removing unnecessary content clutter and focusing on precise typographic harmony, digital magazines become easier to read, faster to scan, and significantly more enjoyable for global editorial audiences.

Impact

Engineered a premium editorial grid and reading environment capable of handling high-volume text streams without compromising visual balance. The minimalist layout treats long-form articles with strict structural hierarchy, directly enhancing reader engagement metrics and lowering screen drop-off rates. By optimizing digital typography scales and implementing clean white space frameworks for modern web media platforms, the final system turns dense journalistic storytelling into a highly sophisticated and scalable publication experience.

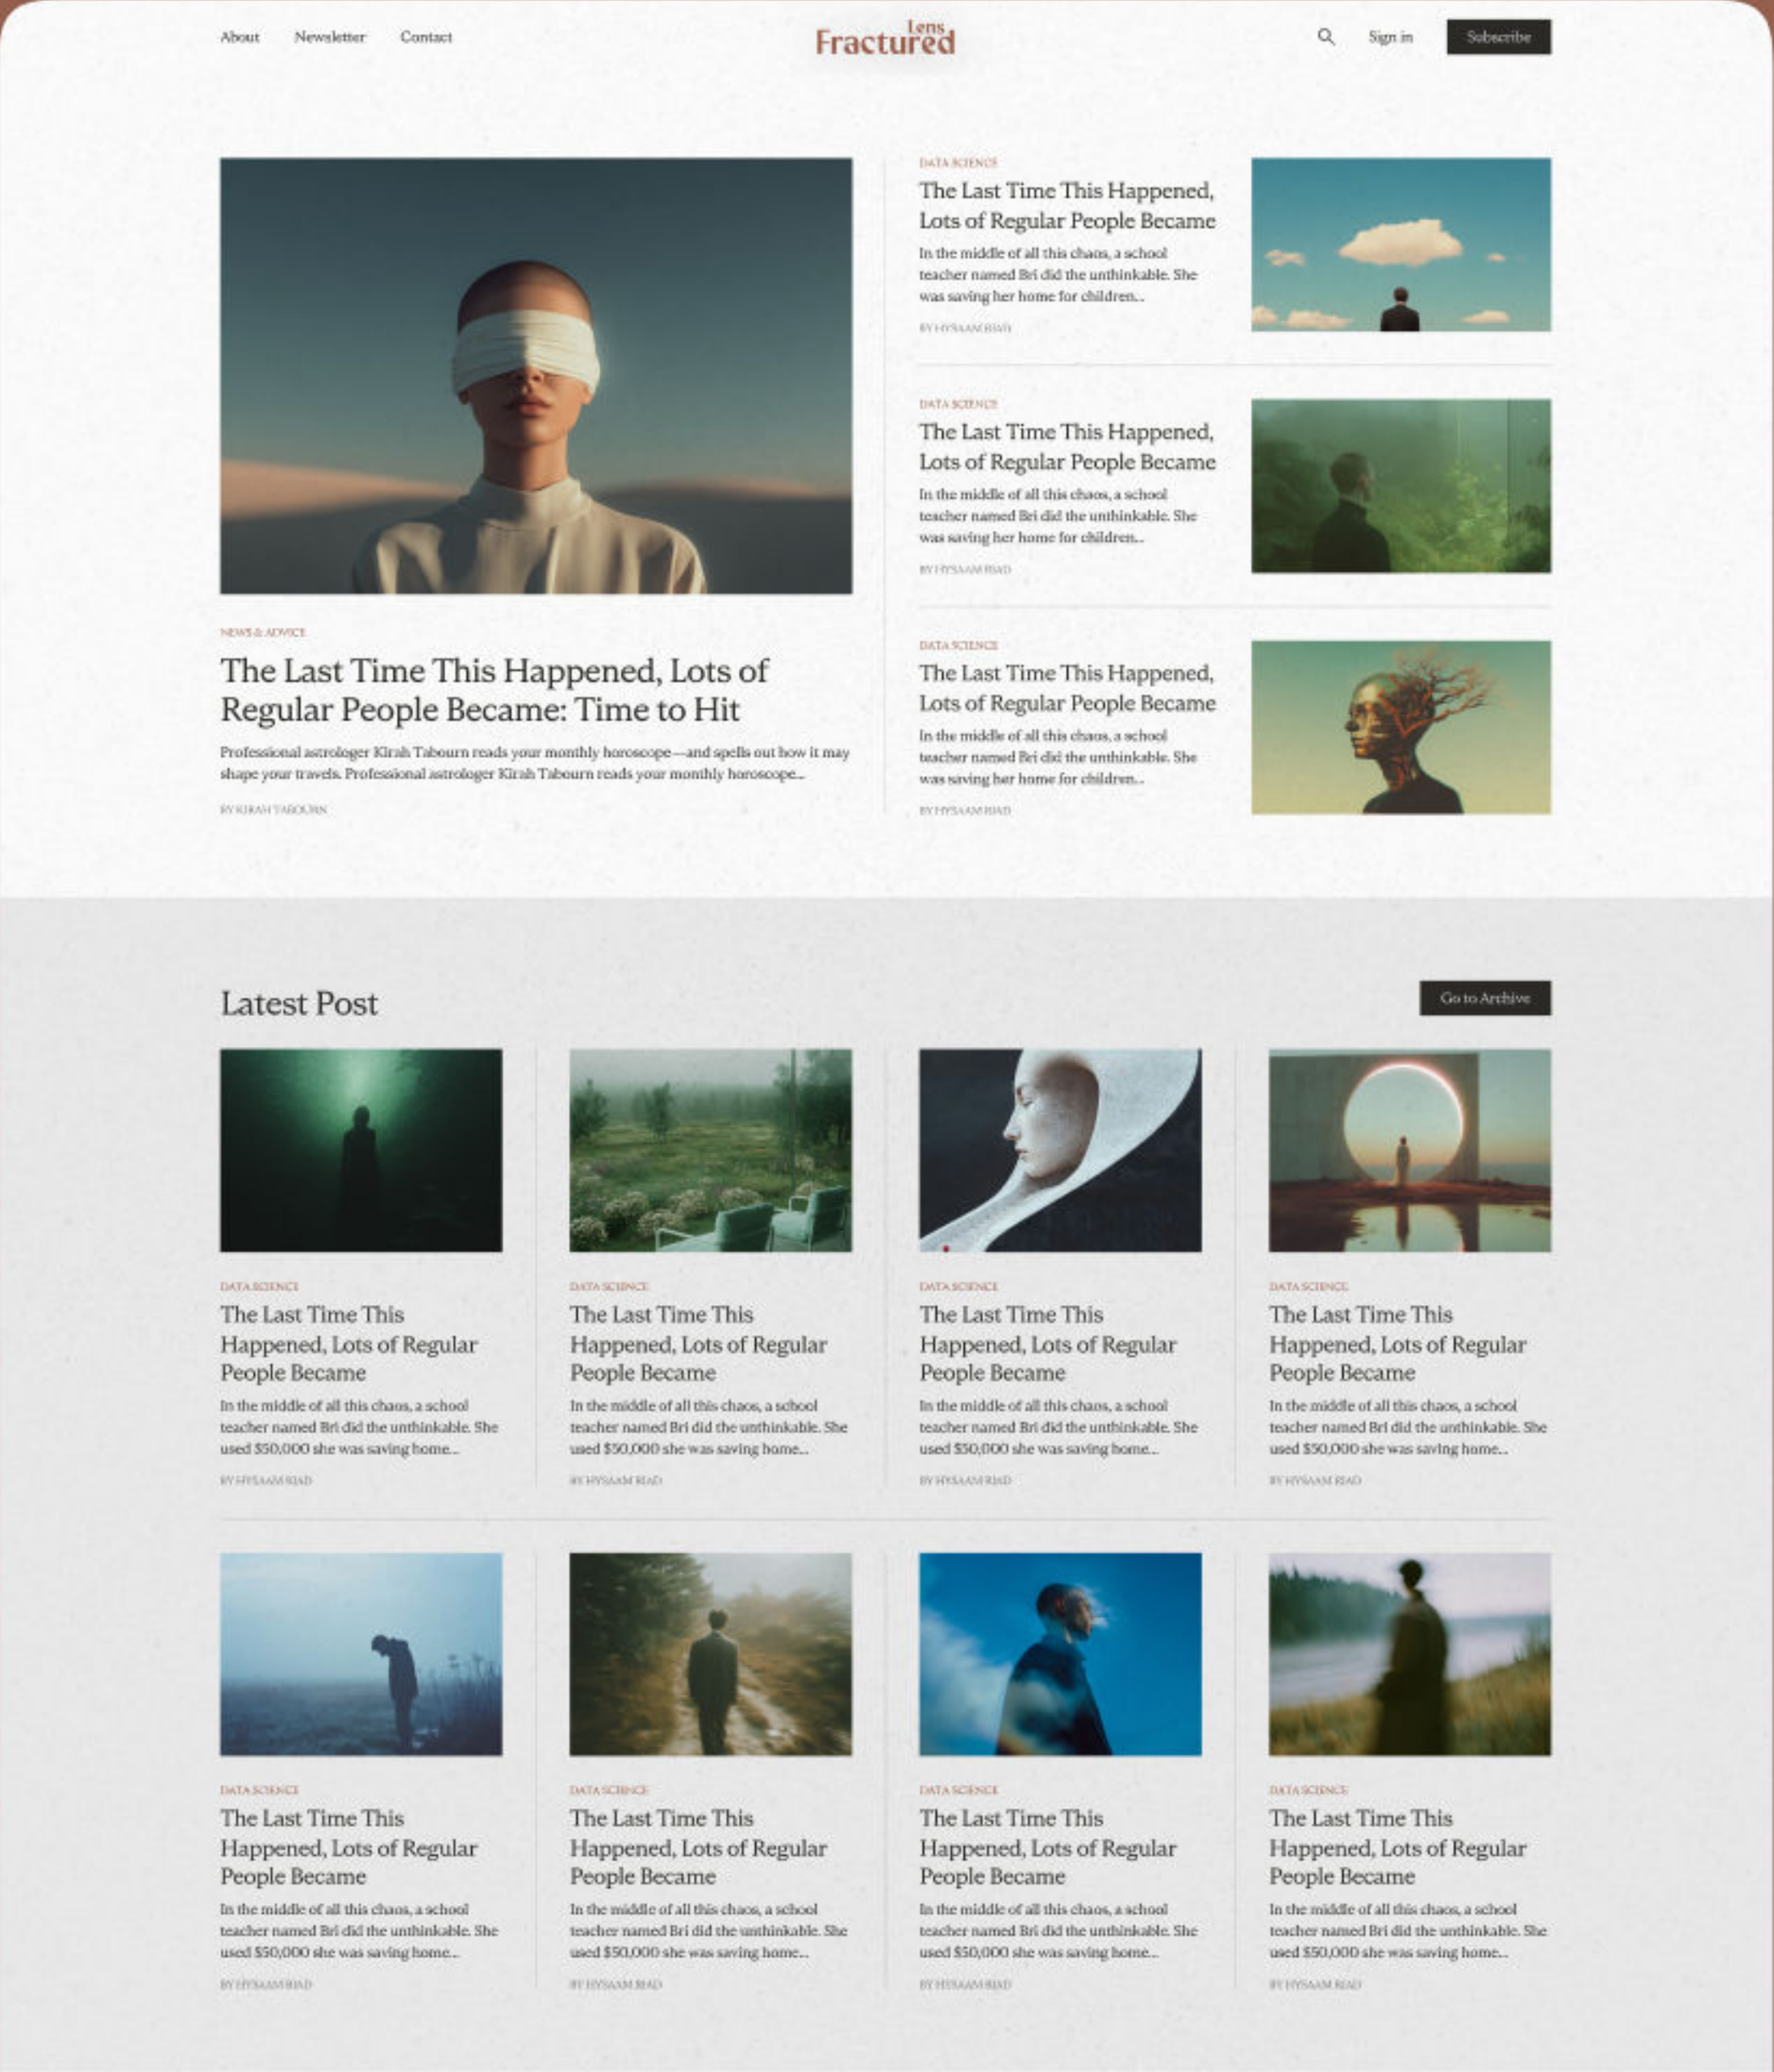

Fractured Lens

Overview

Abstract visual galleries do not have to create complicated experiences. By removing unnecessary interface distractions and focusing on raw photographic showcases, art publications become easier to explore, faster to appreciate, and deeply immersive for modern creative communities.

Impact

Restructured contemporary photography layouts into a beautifully curated digital home that functions like an elite physical gallery space. The artistic interface respects visual content by utilizing invisible navigation systems, directly focusing user attention on the conceptual photography and creative cultural reviews. By blending experimental grid placements with highly predictable interaction patterns, the design delivers an engaging, museum-grade web experience that seamlessly captures the voice of avant-garde visual media.

//

Our company serves over 75,000 corporate clients, meaning our online presence has to work flawlessly for millions of people. This designer handled our massive corporate platform with absolute professionalism. He cleaned up our messy layouts, made the information easy to find, and delivered a trustworthy site that perfectly reflects our market leadership. He works fast, respects data security guidelines, and understands how to design for real corporate scale.

Dr. Richard Chaifetz

Executive Chairman

ComPsych

//

When you are building software for millions of modern creators, your interface can't feel clunky or old-school. Working with him was a fantastic experience. He jumped straight into our product ecosystem, caught the vibe immediately, and made our web screens feel incredibly smooth, fast, and modern. He didn't just make things look pretty; he actually made the app layout easier to navigate, which directly helps our user retention numbers.

Vladimir Danila

Founder & CEO

//

Healthcare and fertility are deeply personal topics, so our website needs to make patients feel safe and comfortable from the very first click. This designer showed incredible empathy during our collaboration. He transformed our complex medical details into a clean, warm, and simple user journey. The website feels calm, professional, and welcoming, which has significantly increased the level of trust our international patients place in us.

Isabel Heissig
Managing Director

cada

//

Our high-net-worth clients demand absolute excellence, and our online identity needed to look like a premium luxury brand. He completely reimaged our digital presence by creating an exquisite, high-end visual layout that instantly commands respect. Beyond the beautiful look, he optimized the booking forms so well that international investors can now navigate our multi-million dollar portfolios and get in touch with us effortlessly.

Victoria Romanenko
Managing Partner

Golden Keys

//

Scaling a high-growth SaaS requires an interface that can handle rapid feature expansion without becoming cluttered. This designer delivered exactly that. He built a logic-driven UI that feels professional and effortless for our power users. The project was handled with high efficiency, and the final screens have significantly improved our onboarding flow and overall platform stickiness.

Alistair Vaughan
Chief Product Officer

//

Managing employee data is a sensitive task, and we needed a platform that felt organized and highly reliable. This designer brought a great sense of structure to our internal tools. He turned our complex HR workflows into a clean, easy-to-use digital environment. Since the launch, our team has reported much higher productivity and far fewer errors when navigating employee records.

Sarah Jenkins

Director of People & Culture

HRFLOW

//

In the world of premium architecture, visual storytelling is everything. Our website needed to feel as structural and elegant as the buildings we design. This designer understood our aesthetic immediately. He created a sophisticated, minimalist interface that allows our portfolio to truly breathe. It is a stunning digital experience that has already impressed several of our top-tier international clients.

Aditya Wijaya
Principal Architect

URBANNEST

//

As a creative agency, our own site has to be our best pitch. We needed a look that was bold, modern, and technically perfect. This designer delivered a world-class visual identity that perfectly aligns with our brand. The layout is sharp, the transitions are smooth, and the entire site screams quality. He is a top-tier talent who knows how to make a brand look like a market leader.

James Sterling

Creative Managing Director

//

We needed a digital presence that felt innovative and human-centric to match our consulting style. This designer was the perfect fit. He crafted a unique, vibrant UI that stands out in a crowded market. The site is incredibly intuitive and has made a measurable difference in how we present our strategic services to clients. A very professional and seamless collaboration from start to finish.

Finn Tāne

Strategy Lead

CO.MIND 

//

Digital publishing is all about the reading experience and visual hierarchy. We needed a layout that could handle heavy content while remaining sleek and modern. This designer nailed the typography and grid system perfectly. The site feels like a premium magazine, making our long-form articles much more engaging. He truly understands how to balance complex information with a high-end aesthetic.

Marcus Thorne

Editor-in-Chief

OFFSE_TMAG

//

Our publication focuses on high-concept visual arts, so we needed a digital home that felt like a curated gallery. This designer created a beautiful, artistic interface that respects our photography and editorial content. The navigation is creative yet simple, providing a seamless experience for our readers. He has an incredible eye for detail and a deep understanding of modern visual culture.
